Inspire. Create. Perform.

Lightment

# NoLimit

## Inspire. Create. Perform.

NoLimit is an innovative linear LED system allowing architects, planners and building owners to plan and realise their lighting tasks autonomously.

Basis of NoLimit is a modular construction kit consisting of clearly defined components: profiles, light inserts, control gear. All parts are tuned to one another and designed for an easy and trouble-free configuration. It is an open and growing system which is constantly adapted to current developments.

### Inspire

NoLimit offers everything to realise sophisticated lighting solutions. The basic modules offer the planner an unlimited number of possible combinations allowing him to let his inspiration run wild.

### Create

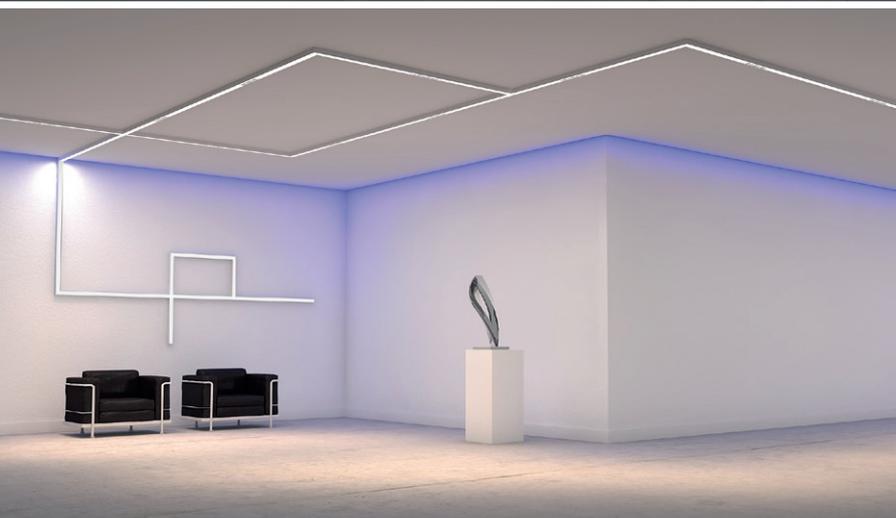

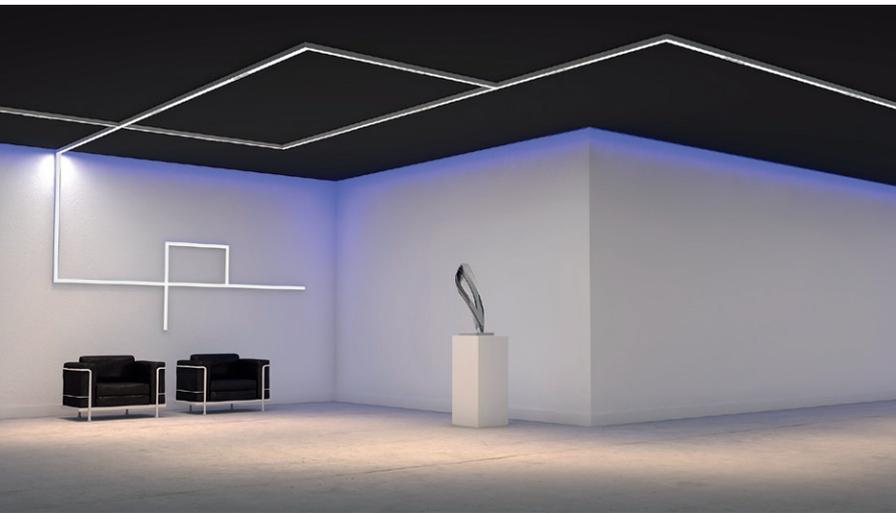

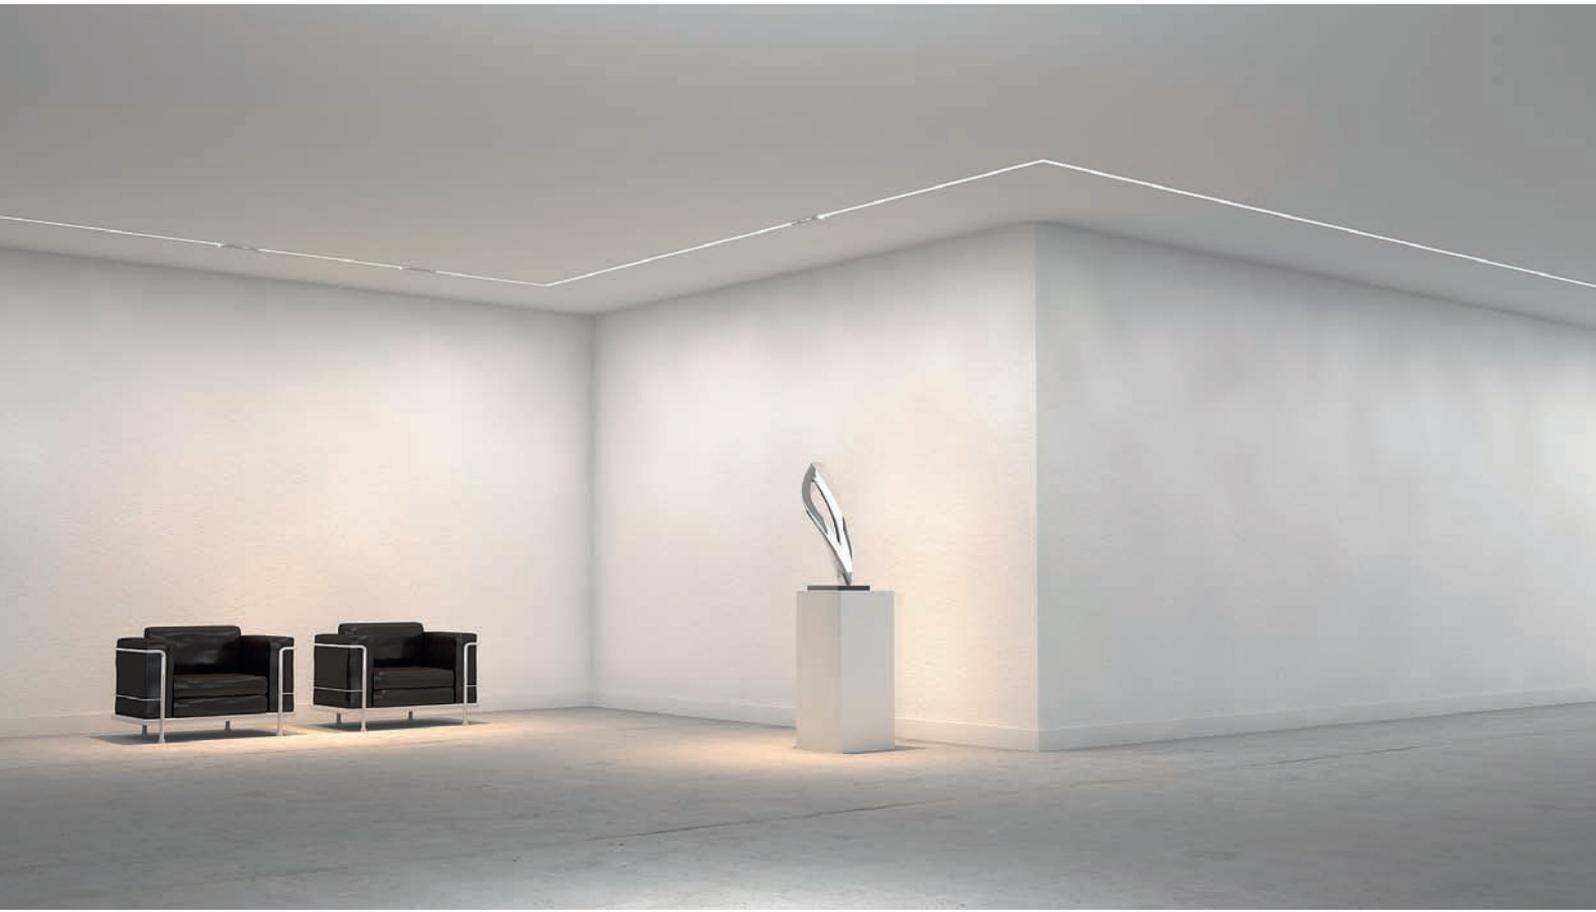

With NoLimit the planner on his own decides on the ceiling structure and the light effect in the room. The minimalist design of the slim profiles blends well with the architecture: the housing colours black and white are either striking or recede optically, combined with a shadow gap of 2 mm.

### Perform

Optical, reflector and linear inserts characterise the interior of NoLimit, supplemented by cover profiles. The profiles take up light inserts and power supply units and allow flexible fitting and retrofitting.

The light inserts can be positioned either indented, flush or protruding. This 3-level-design brings architects and planners added value in design.

**NoLimit**

# Construction kit LIGHT

## Bright tools for creative design.

### Perfect shape: the profiles

Currently, NoLimit comprises six profiles for the realisation of the most different lighting tasks. Large profiles have three latch positions, small profiles have two. The whole linear system has got a uniform appearance. Planning with NoLimit means achieving a homogeneous design for the whole structure.

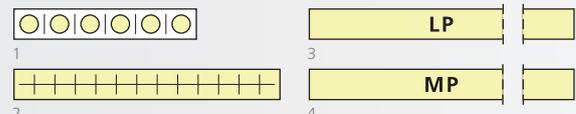

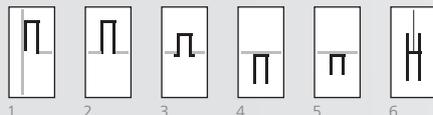

1. Corner light cove
2. Built-in ceiling profile without frame
3. Built-in ceiling profile with frame
4. Surface-mounted profile, large
5. Surface-mounted profile, small
6. Pendulum profile

### Brilliant all-rounders: the light inserts

Currently, the planner chooses from four light inserts: High Power with optics, High Power with reflector, Mid or Low Power as linear module. This variety guarantees individual solutions for accent and general lighting. NoLimit supports colour-dynamic sequences with RGBW and Tunable White control.

1. Light insert High Power Optics
2. Light insert High Power Reflector
3. Light insert Low Power Linear
4. Light insert Mid Power Linear

6 profiles + 4 light inserts

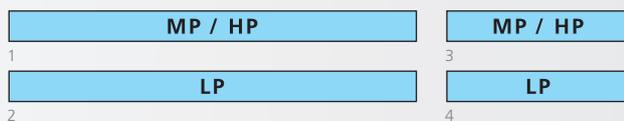

### Strong basis: the control gear

The broad portfolio of NoLimit requires an adequate electrical supply: voltage-controlled for applications in Low Power range, current-controlled for Mid and High Power. The control gear is housed within the profiles or is fastened outside. The LI-value (capacity index) determines which power supply units can be combined with which luminaires.

1. Supply module for Mid and High Power modules (inside the profile)
2. Supply module for Low Power modules (inside the profile)
3. Supply module for Mid and High Power modules (outside the profile)
4. Supply module for Low Power modules (outside the profile)

+ 4 control devices = NoLimit

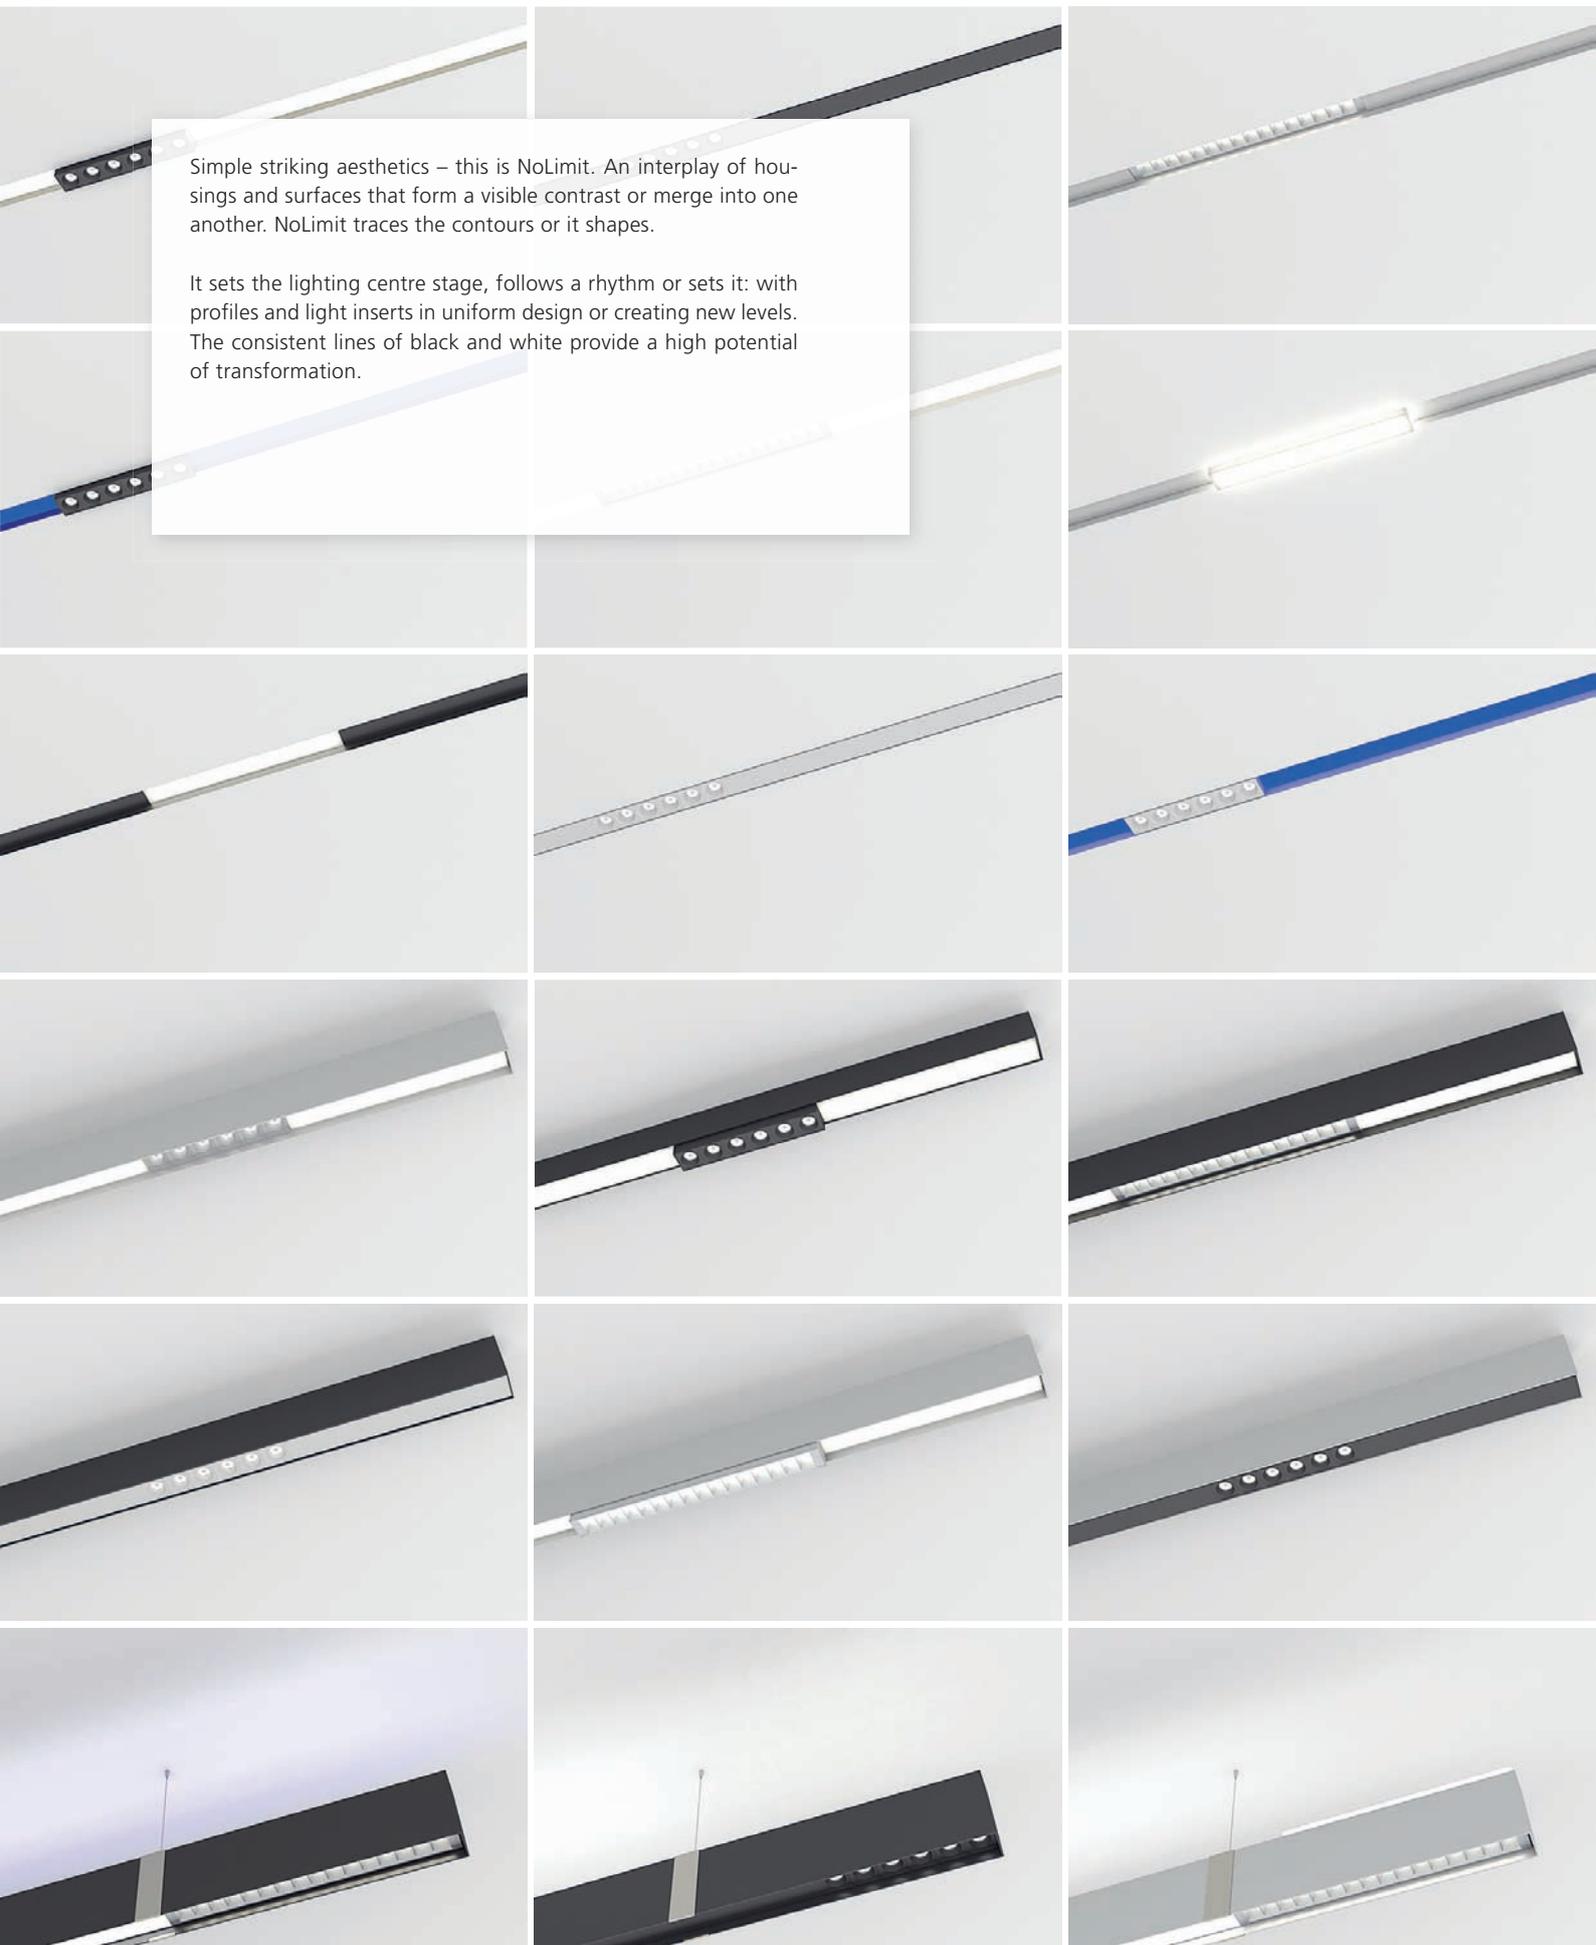

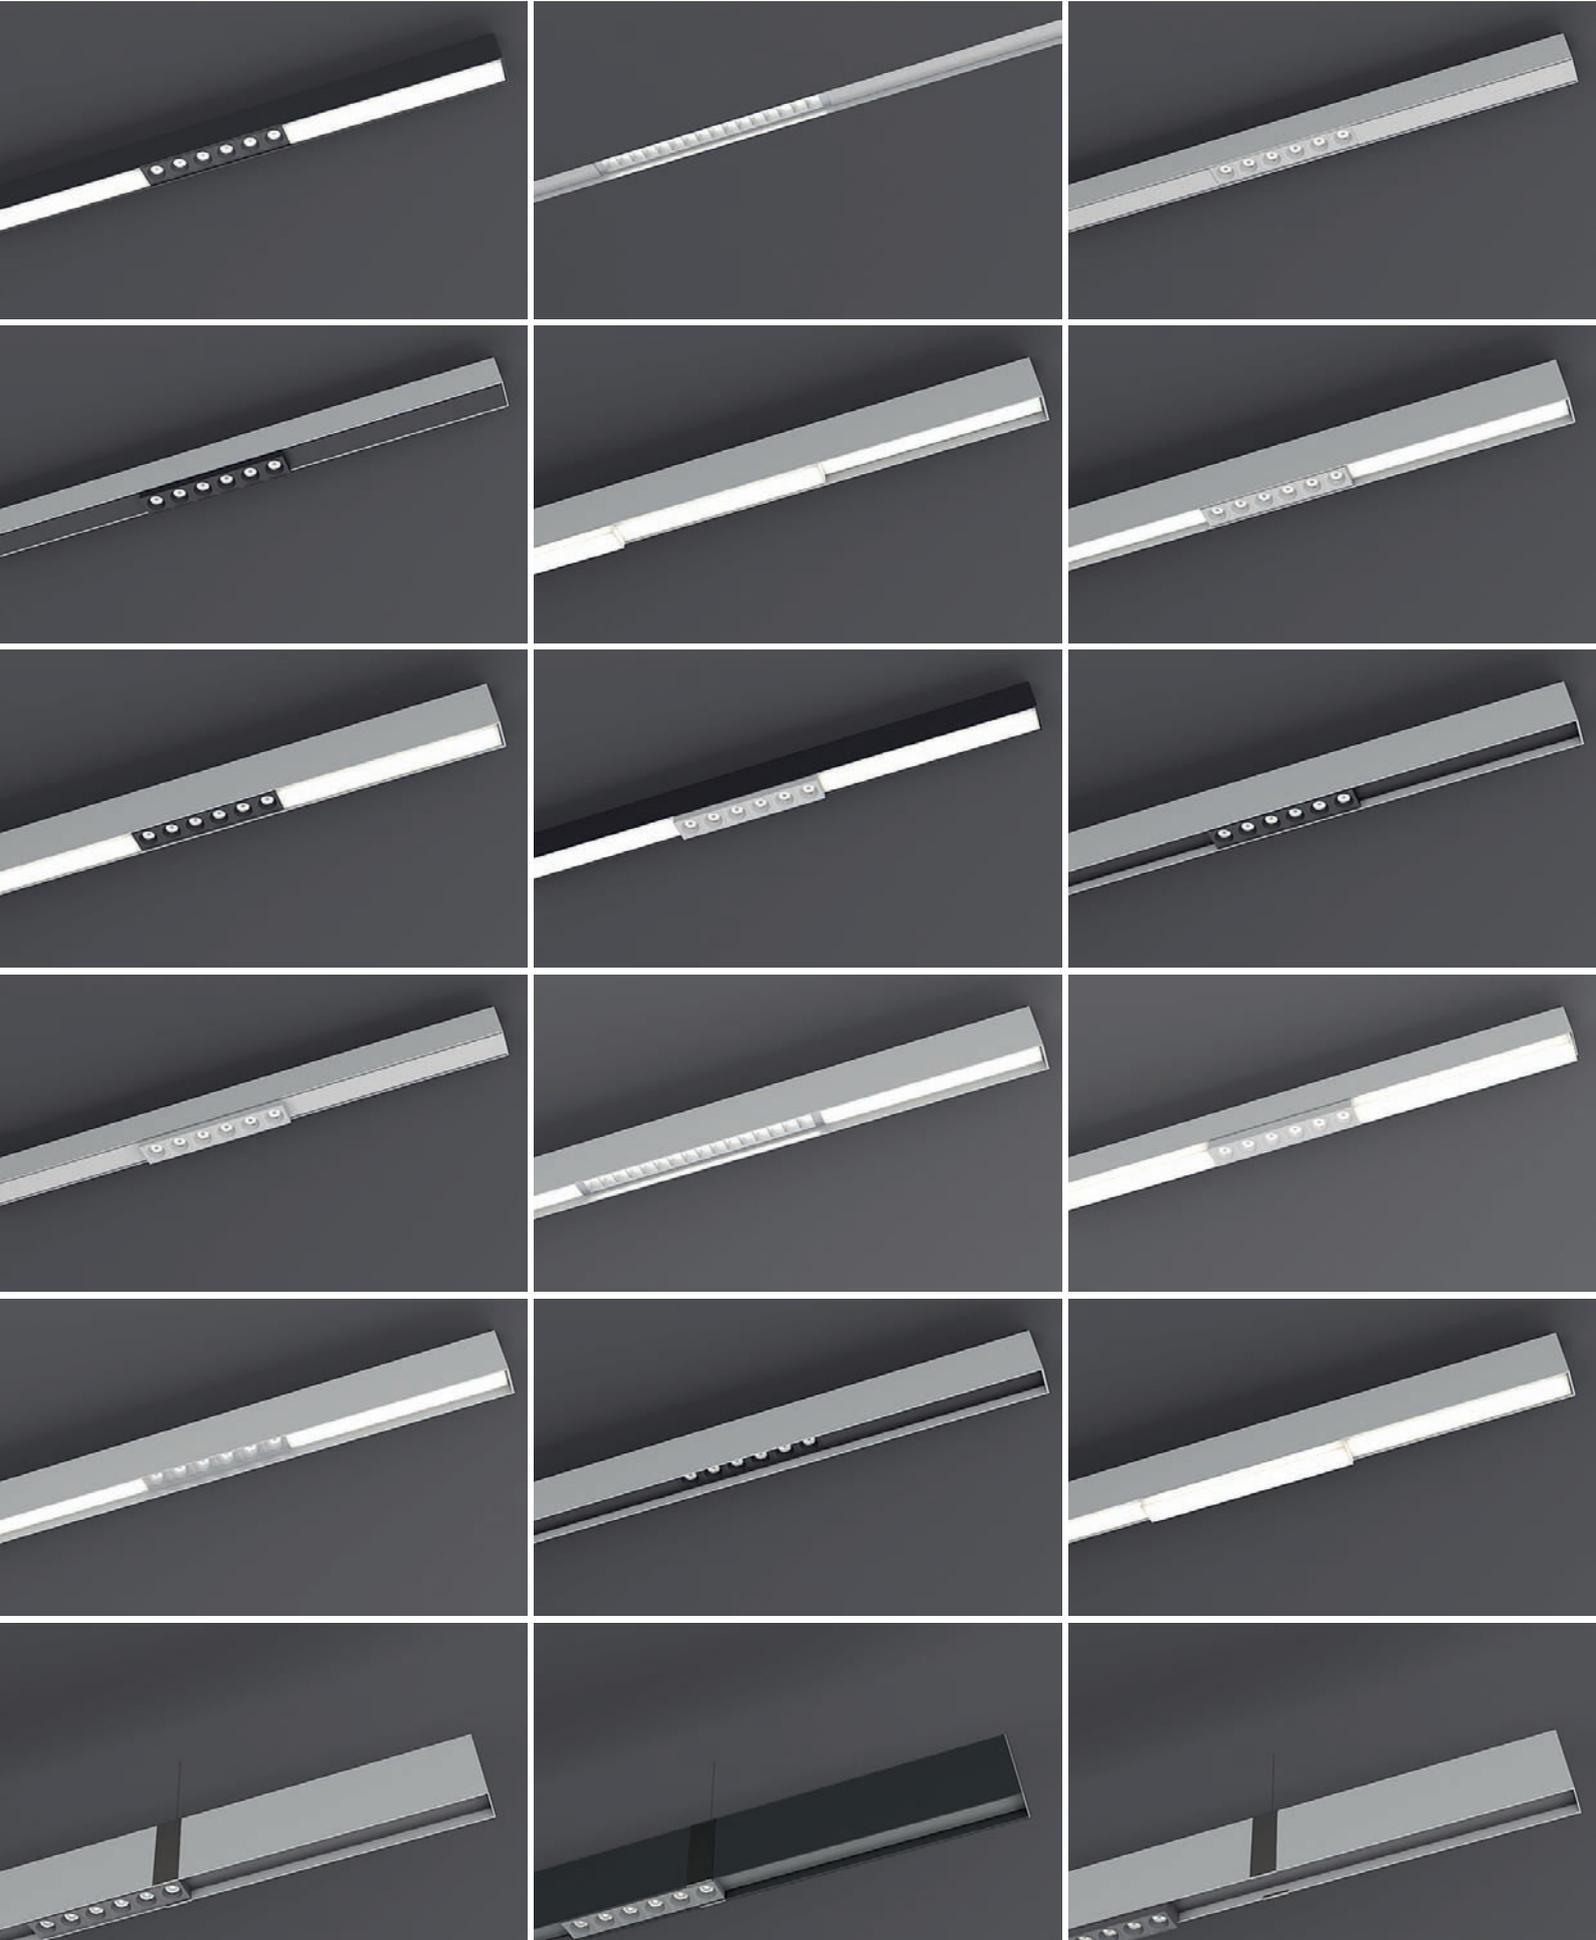

# Black & White

## Unlimited variety.

Simple striking aesthetics – this is NoLimit. An interplay of housings and surfaces that form a visible contrast or merge into one another. NoLimit traces the contours or it shapes.

It sets the lighting centre stage, follows a rhythm or sets it: with profiles and light inserts in uniform design or creating new levels. The consistent lines of black and white provide a high potential of transformation.

---

# Minimal shape. Maximum flexibility.

## **Slim & efficient**

NoLimit combines comprehensive lighting technology and delicate design. With a width of only 4 cm and a standard length of 2.30 m it sets completely new standards with regard to dimensioning of linear systems. It allows an exact and continuous line at wall and ceiling and at the same time provides highest light quality also with higher luminous flux.

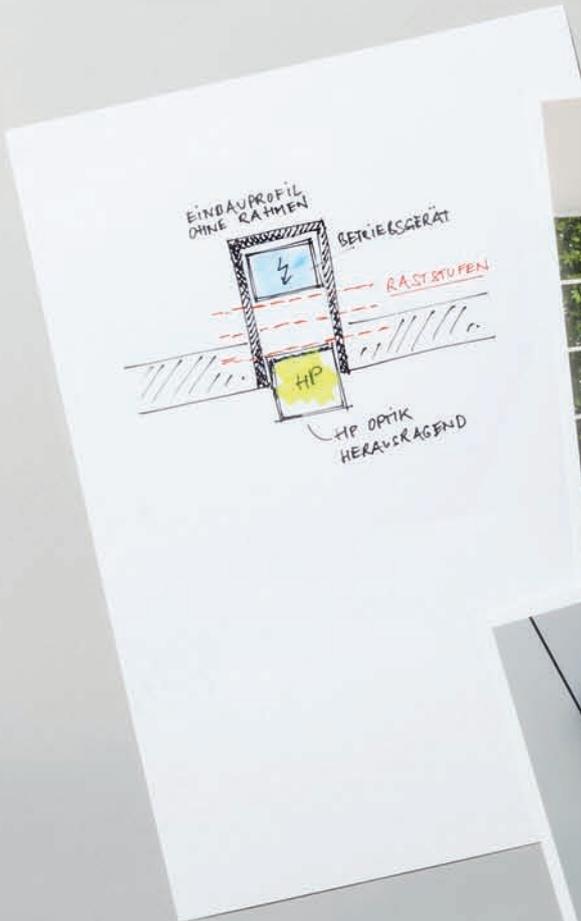

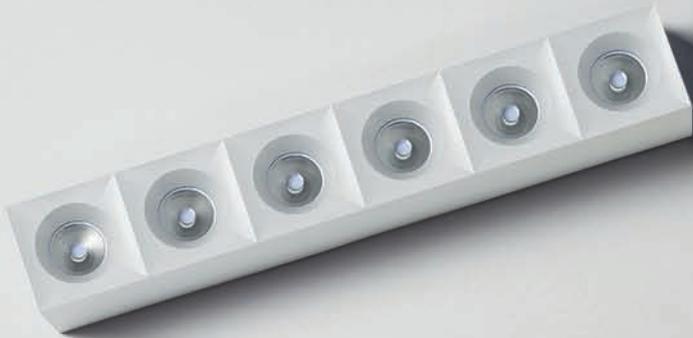

## **Light design to the power of 3**

NoLimit lets the planner decide on the appearance of light and its effect in the room. With the 3-level-design he has an intelligent tool at hand. The profiles take up the different light inserts which are installed flush with wall or ceiling, indented or protruding.

## **Optical detail**

A shadow gap of 2 mm underlines the straight-line design of NoLimit. It supplements the overall appearance in a subtle way and becomes clearly visible if the light inserts within the installed profiles run on the same level.

# The profiles

## Precise & compact.

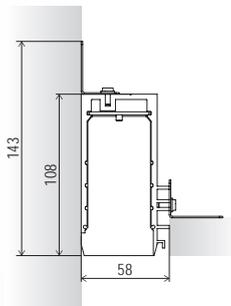

The profiles are available in two colours, black and white. The current portfolio comprises six different variants for flush-mounting, surface-mounting or pendant mounting with two to three latch positions and in two sizes. With extensions to the standard length of 2.30 m NoLimit allows a continuous

custom-made design to measure. Light inserts and control gear are integrated into the profiles by means of a uniform tool-less fastening system. This "snap in"-concept ensures flexibility also in retrofitting.

### Corner light cover

**For perfect transitions.**  
Offers three latch positions (indented, flush, protruding).

# Light insert High Power Optics

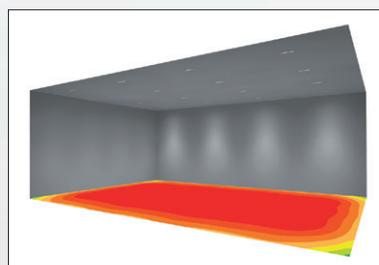

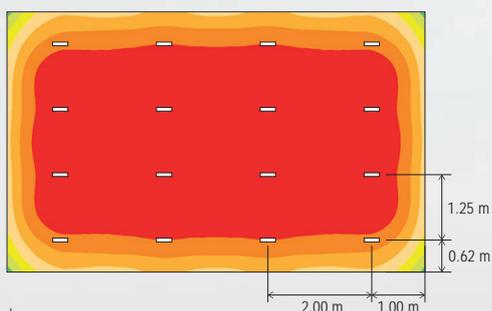

## Concentrated energy

High Power-Modules are excellently suitable for complex applications in general and accentuating lighting. The optics used model the light, they provide for an exact light guidance and a uniform illumination. The light insert High Power Optics works with four different radiation angles: focused spot, medium, flood and broader oval.

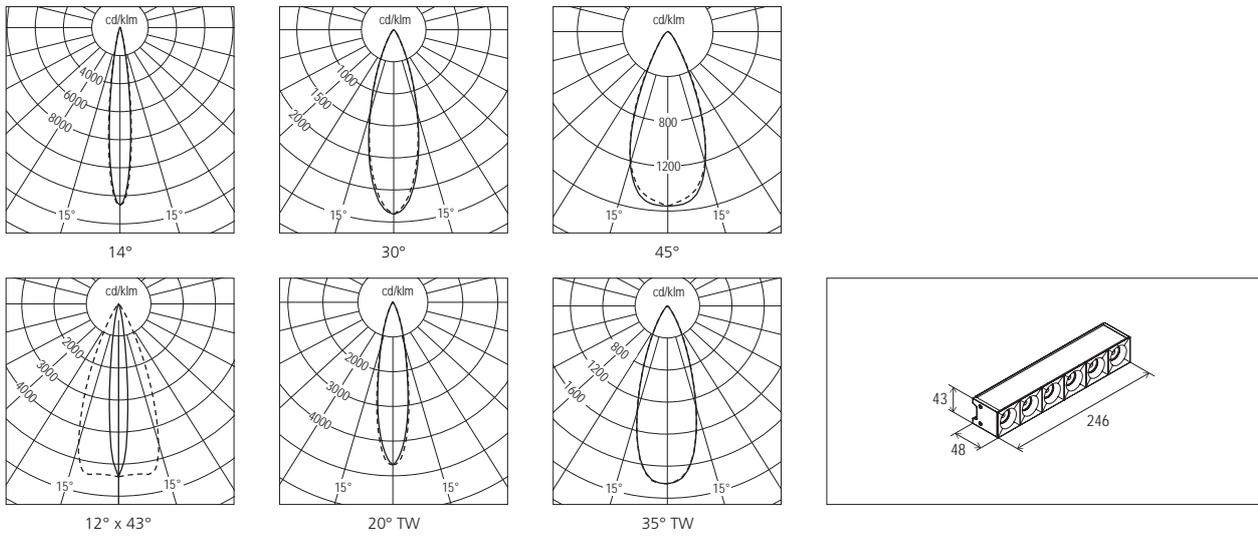

Available colour temperatures are 2700, 3000 or 4000 K, with Tunable White control between 2700 and 5000 K. The luminous flux reaches maximum values of up to 1900 lm and leaves the optics cleanly mixed and free from artefacts, also with Tunable White.

## Light calculation (example)

**Room dimensions:**  
8 m x 5 m x 3 m (L x W x H)  
**Surface:**  
40 m<sup>2</sup>  
**Medium illuminance:**  
509 lx on the floor (nominal value)  
**Total consumption:**  
16 luminaires of 17 W each =  
272 W installed capacity  
**Specific connected load:**  
6.8 W/m<sup>2</sup> = 1.34 W/m<sup>2</sup>/100 lx

# Light insert High Power Reflector

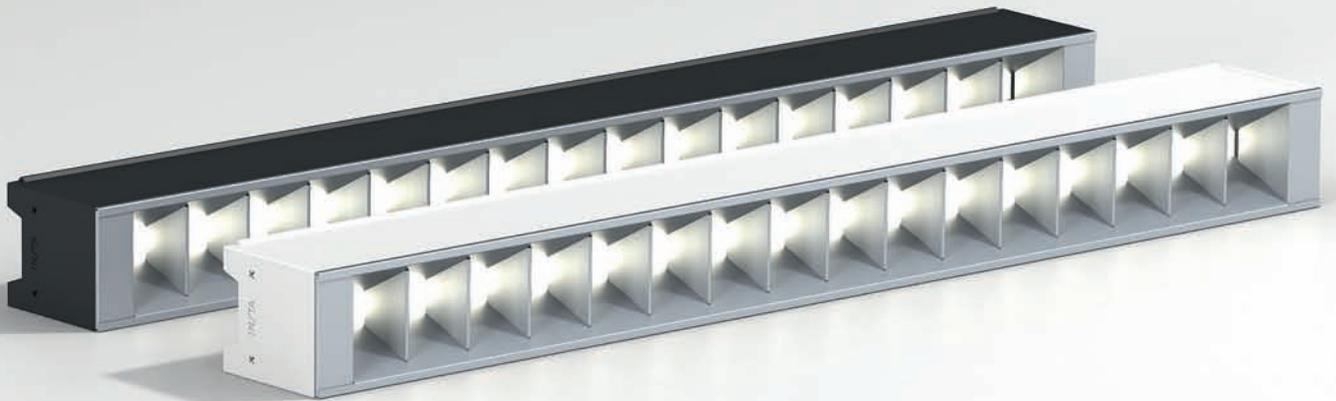

## The functional classic 2.0

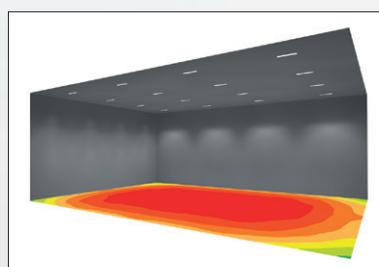

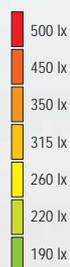

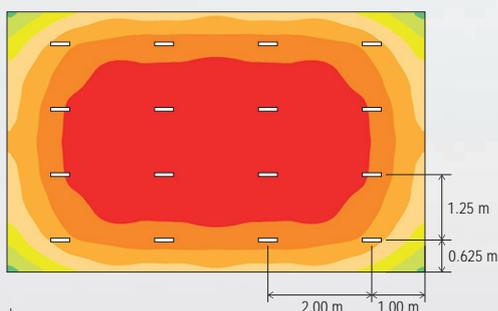

The High Power Reflector is predestined for an efficient, standard-conform and homogeneous general lighting of large surfaces. Also with a low budget high illumination levels can be realised.

With its radiation angle of  $45^\circ \times 56^\circ$ , the logarithmic micro-reflector provides for optimal glare elimination. By well-aimed redirection and reflection, the luminaire appears as harmonious light band, without visible light output.

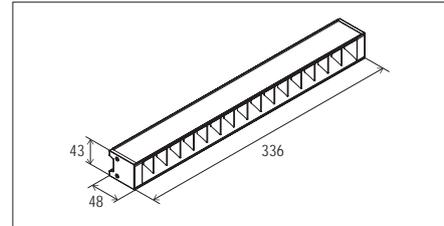

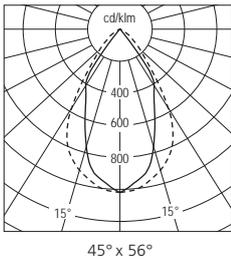

The High Power high-capacity LEDs Tunable White allow a controllable colour temperature of 2700 to 5000 K at a luminous flux of 1585 lm. So this high-tech light solution clearly stands out compared to conventional louvre luminaires with static light colour.

## Light calculation (example)

**Room dimensions:**  
8 m x 5 m x 3 m (L x W x H)  
**Surface:**  
40 m<sup>2</sup>  
**Medium illuminance:**  
462 lx on the floor (nominal value)  
**Total consumption:**  
16 luminaires of 20 W each =  
320 W installed capacity  
**Specific connected load:**  
8.0 W/m<sup>2</sup> = 1.73 W/m<sup>2</sup>/100 lx

# Light insert Low Power Linear

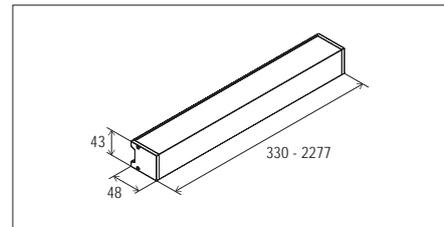

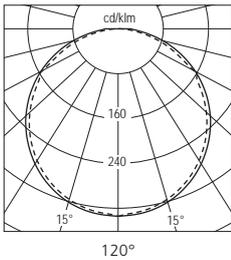

## The gapless solution

These linear light inserts are equipped with Low Power LED. Major benefit compared to the high-power variants is their extreme flexibility. Linear modules are available up to a length of approx. 2.30 m, in total the portfolio comprises more than 150 available types. This results in a coherent design.

RGBW Low Power modules provide the ideal accentuating lighting and can be controlled individually within a grid of 16 cm, either for light guide systems in buildings or as effective mood lighting.

The colour temperature of Low Power Linear is 2700, 3000 or 4000 K. In addition to the defined colours blue and green the light insert supports a dynamic control with RGBW. Light luminous flux varies depending on the lamp and can reach up to 400 lm/m.

# Light insert Mid Power Linear

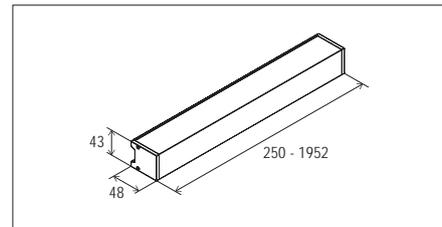

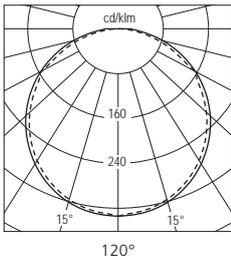

## The structured all-rounder

The variant Mid Power Linear is a more powerful component of the Linear light inserts. It meets highest demands on high-quality accentuating and general lighting.

Tunable White Mid Power modules provide for general and accent lighting. The light inserts can be operated with DALI via the operation devices. So different light groups can be controlled in one line arrangement.

The colour temperature of Mid Power Linear is 2700, 3000 or 4000 K, the Tunable White variant allows a variable colour temperature of 2700 K up to 5000 K. The modules reach a luminous flux up to 1750 lm/m.

\*depending on the control gear chosen

# Control gear & accessories

## Supply to measure.

For the Low and Mid Power modules as well as for the High Power modules there are two separate mains systems available: voltage-controlled for Low Power, current-controlled for Mid Power Linear and High Power. The control gear can either be fastened inside or outside the profiles. The supply modules for the installation inside the mounting profile are prepared for through-wiring of the primary supply voltage. All power supply units and luminaires are provided with an LI-value (capacity index); indications refer to the required minimum and maximum load (e.g. 50 - 100).

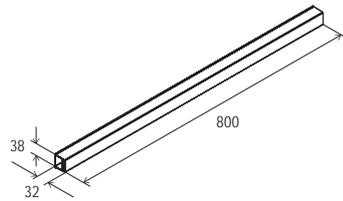

In the end, the total load of the selected luminaires must range between the minimum and maximum value of the control gear. If the value is exceeded, further supply devices are needed. The accessories complete NoLimit and comprise all necessary contacting elements, for Low Power (3-pole) and for Mid Power Linear and High Power (4-pole). Included are simple pluggable extension leads in different lengths as well as a short-circuit plug for the current-controlled Mid Power Linear and High Power modules.

## Low Power

### Control gear for Low Power modules

LP

Installation inside the mounting profiles with through-wiring

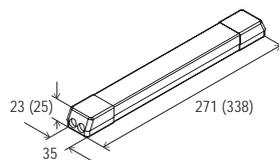

Overall size (mm)			Nominal voltage AC (V)	max. mains capacity (W)	LI min	LI max	Interface	Secondary	Protection class	Article number

# The configuration Single-sourced.

## Plug & Play with NoLimit

The start into the configuration of NoLimit is easy and leads you step by step to the realisation of your own project. This optimises the planning process and saves time.

### 1 Choose the profile

They characterise the architecture of a building in black or white and influence the design of ceiling and wall.

If the desired profile exceeds the standard length of 2.30 m, it can be extended by profile joints. End caps positively cover the ends. The cover profile covers technique and cables within the profile, adapted in colour to profile and surface or in contrasting colours.

- 1 x Pendulum profile, 2220 mm
- 1 x Set Front cap
- 1 x Set Pendulum profile ropes + fastening
- 1 x Set Pend. pr. connection cable
- 1 x Set Pend. pr. deco strap
- 1 x Set Pend. pr. baldachin white

- 2 x Profile cover, 736 mm
- 2 x Profile cover, 275 mm
- 1 x Profile cover, 880 mm

### 2 Choose light inserts

They determine the character of the light and its effect in the room, whether as accent or general lighting.

Optical, reflector and linear modules make it possible, supported by the 3-level design. The light inserts are either indented, flush with the edge of the profile or protruding. The pictograms show whether two or three latch positions are available. Changes in height within the profile and the intended use of cover profiles make the design interesting.

- 3 x High Power Optics TW

- 2 x High Power Reflector TW

### 3 Choose control gear

They guarantee the suitable power supply for Low, Mid and High Power modules.

The LI-value (capacity index) is the key to the system and easy to apply also for newcomers. If you have decided on the design of the luminaires, the suitable power supply units must be chosen. All luminaire modules and supply units have an LI-value with minimum and maximum factor (LI min, LI max). If the total load of the selected luminaires exceeds the maximum value of the power supply unit, further supply devices are needed (see formula). Modules can be combined within the profiles but always need a separate power supply each for Low or Mid and High Power.

- 1 x Control gear for High Power modules
- 2 x Extension cable 0.5 m
- 1 x Short-circuit plug

$$LI \min \leq \text{sum LI light inserts} \leq LI \max$$

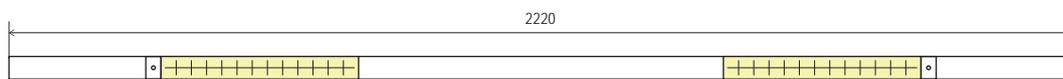

### An example

NoLimit is an open and flexible in system. The linear design can be realised without limitations, independent of the profiles chosen or the place of installation. Large profiles have three, small profiles have two installation heights.

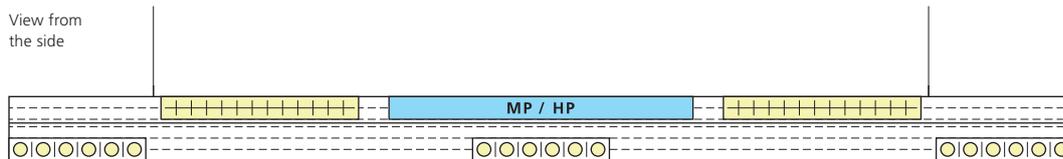

The 3-level design provides 3 latch positions: The light insert is indented, flush or protruding. With NoLimit the planner becomes designer, this is the special added value.
